PROFILE

3rd-year IT undergraduate and aspiring software engineer who enjoys backend development, web technologies, and Android application development. Experienced in building practical software solutions spanning AI-powered desktop assistants, mobile applications, and IoT automation systems. Seeking a Software Engineering internship to apply hands-on technical skills, contribute to real-world projects, and continue growing alongside an experienced engineering team.

EDUCATION

Sri Lanka Institute of Information Technology — B.Sc. (Hons) in Information Technology 2024 – 2028 (Expected)
Currently in Year 3, Semester 1 | GPA: Pending

- Relevant coursework: Data Structures & Algorithms, Database Management Systems, Software Engineering, Web Application Development, IT Process & Infrastructure Management, Probability & Statistics

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML/CSS, SQL
Frameworks & Libraries: Node.js, Next.js, Spring Boot, React
Databases: MySQL, MongoDB, Oracle DB
Tools & Platforms: Git/GitHub, Vercel, Railway, VS Code, Postman
Other: Linux (Ubuntu)

PROJECTS

SARA AI Agent — Local JARVIS-inspired AI assistant for Windows desktop

Tech stack: Python, Qwen 2.5, Ollama, CustomTkinter, Whisper, SQLite

- Built a local AI desktop assistant capable of executing 100+ Windows commands through voice and text interactions.
- Implemented Qwen-based intent recognition, JSON command routing, voice recognition, text-to-speech, system control, and safety confirmations for sensitive operations.
- Developed a modular architecture with local AI processing, SQLite memory, Windows automation, and a plugin system for future extensions.

Android Music Player — Feature-rich offline audio player with online metadata enrichment

Tech stack: Android Studio, Java / Kotlin, Android SDK, Media3 / ExoPlayer | github.com/Kalhara321

- Built advanced audio controls with a built-in equalizer plus real-time tempo, pitch, and playback speed adjustments.
- Implemented dynamic album art retrieval, automatically fetching missing high-res covers and artwork from online sources.
- Added smart file filtering, custom playlist management, favorites, and local library indexing across diverse audio formats.

Water Tank Monitoring & Automation System — IoT-based water level monitoring and alerting

Tech stack: Arduino, ESP32, Water Level Sensors

- Built an Arduino and sensor-based system that measures and displays the current water level in a tank as a live percentage.
- Implemented ESP32-based monitoring with an onboard display and audible alarms for low and high water level thresholds.
- Added a phone notification system to alert users in real time when water levels reach critical thresholds.

EXPERIENCE

Sales Associate — Shopping Expo Seasonal, Full-Time

- Engaged with diverse client requests and maintained high customer satisfaction ratings during high-traffic exhibition events.
- Collaborated with cross-functional teams to streamline retail operations on the exhibition floor.
- Core competencies demonstrated: Customer Service, Communication, Sales, Teamwork.

EXTRA-CURRICULAR & ACHIEVEMENTS

- Crew404 CodeJam — Participant, Hackathon & Competitive Programming: built rapid software solutions under strict time constraints while collaborating with a team.
- University Innovation Exhibition — Verified entry for the Water Tank Monitoring & Automation System, an automated sensor-based water resource management solution.
- Active open-source contributor — github.com/Kalhara321
